JHERNWIN E. FLORA

Sariaya, Quezon, Philippines, 4322 | (+63) 977-199-8719 | jhernwinflora08@gmail.com
| github.com/jhernwinflora | linkedin.com/in/jhernwin-flora-8a972a3a7

PROFILE

Detail-oriented Mathematics graduate seeking an Entry-Level Data Analyst role, with hands-on experience using SQL, Python, Power BI, and Excel for exploratory data analysis, database management, and business intelligence. Adept at deriving actionable insights from complex datasets to support business decision-making.

EDUCATION

Southern Luzon State University June 2026

Bachelor of Science in Mathematics

- Relevant coursework in Actuarial Mathematics, Probability, Statistical Modelling, Numerical Analysis

TECHNICAL SKILLS

Languages & Databases: SQL, Python, MySQL
BI & Analytics Tools: Power BI, Advanced Excel, Git/GitHub, Microsoft Office
Core Competencies: Data Cleaning, Exploratory Data Analysis (EDA), Database Management

CERTIFICATIONS

- **Data Analysis with Python** — Cognitive Class — October 2026
- **Data Analytics Essentials** — Cisco — October 2026
- **Introduction to Data Analytics** — Simplilearn — October 2026

DATA ANALYTICS PROJECTS

E-Commerce Sales & Customer Performance Analytics

Personal Project | MySQL, Power BI | https://github.com/jhernwinflora/E-Commerce-Analysis

- **Objective:** Analyzed 250,000+ transactional sales records across 40,000 customers to evaluate revenue realization, dissect customer tier profitability, and assess supply chain efficiency.
- **Process:** Performed data ingestion, cleaning, date sanitization (STR_TO_DATE), and window function analysis (LAG, ROW_NUMBER) in MySQL; developed an interactive multi-page Power BI dashboard utilizing a star-schema model, custom DAX measures, and a collapsible slicer panel.
- **Outcome:** Quantified ₹4.74B in realized revenue and ₹1.19B in order leakage (pending/refunded/lost), uncovered high category concentration (Electronics at 72.6%), and evaluated discount bracket sensitivities (26–50%) to formulate actionable operational strategies

Bank Customer Churn & Retention Analysis

Personal Project | MySQL, Power BI | https://github.com/jhernwinflora/Bank-Churn-Analysis

- **Objective:** Investigated customer attrition patterns for a retail bank using a 10,000-record dataset to quantify financial risk, isolate high-risk customer segments, and analyze the root causes behind a 20.37% baseline churn rate.
- **Process:** Performed data cleaning and transformation in MySQL (standardizing binary flags to categorical text and auditing data quality); built a multi-dimensional SQL query suite using aggregations and conditional logic; developed an interactive Power BI executive dashboard powered by custom DAX measures.
- **Outcome:** Uncovered a critical geographic risk in Germany (32.4% churn rate), identified a multi-product adoption trap (customers holding 3–4 products experienced 82%–100% churn), and isolated high-vulnerability age cohorts (ages 50–59) to formulate actionable retention strategies

INTERNSHIP EXPERIENCE

Provincial Assessor's Office – Quezon Province Mar 2026 - Apr 2026

Tax Mapping Intern

- Encoded Tax Mapping Control Roll (TMCR) data from AutoCAD records into Excel-based databases while ensuring compliance with established formats.
- Consolidated and updated approved municipal plan records from various municipalities in Quezon Province.
- Performed data verification and validation to maintain the accuracy and completeness of property-related records.
- Managed large datasets using Microsoft Excel and supported the digitization of assessment and mapping information.
